Experiment -8

Student Name: Siddhant Garg UID:22BCS10547

Branch: BE-CSE Section/Group: KRG 2B

Semester:6th

Date of Performance:17/03/2025
Subject Name: Project Paged Learning
Subject Code: 22CSH 350

Subject Name: Project-Based Learning Subject Code: 22CSH-359 in Java with Lab

Aim: To develop a servlet that accepts user credentials from an HTML form and displays a personalized welcome message on successful login.

Objective: Learn form handling with Servlets Understand HTTP request/response handling Practice doPost() method

Code:

```
<!DOCTYPE html>
<html>
<head><title>Login</title></head>
<body>
 <form action="LoginServlet" method="post">
  Username: <input type="text" name="username"><br>
  Password: <input type="password" name="password"><br>
  <input type="submit" value="Login">
 </form>
</body>
</html>
import java.io.*;
import javax.servlet.*;
import javax.servlet.http.*;
public class LoginServlet extends HttpServlet {
  protected void doPost(HttpServletRequest request, HttpServletResponse response)
       throws ServletException, IOException {
    String user = request.getParameter("username");
    String pass = request.getParameter("password");
    response.setContentType("text/html");
    PrintWriter out = response.getWriter();
    if ("admin".equals(user) && "1234".equals(pass)) {
```

DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING Discover. Learn. Empower.

```
out.println("<h2>Welcome, " + user + "!</h2>");
} else {
   out.println("<h2>Login Failed. Invalid credentials.</h2>");
}

</web-app>
</servlet-
</servlet-name>LoginServlet</servlet-name>
</servlet-class>LoginServlet</servlet-class>
</servlet-
</servlet-mapping>
</servlet-name>LoginServlet</servlet-name>
</url-pattern>/LoginServlet</url-pattern>
</servlet-mapping>
</
```

Output:

1)

```
Enter username: admin
Enter password: 1234
Welcome, admin!
```

2)

```
Enter username: user
Enter password: password
Login Failed. Invalid credentials.
```

Experiment -8.2

Aim: To build a servlet integrated with JDBC that displays all employees and enables search by employeeID.

Objective: 1) Use JDBC with Servlet

- 2) Fetch and display records
- 3) Implement search functionality

Code:

```
<!DOCTYPE html>
<html>
<head><title>Search Employee</title></head>
<body>
 <form action="EmployeeServlet" method="post">
  Enter Employee ID: <input type="text" name="empId">
  <input type="submit" value="Search">
 </form>
</body>
</html>
import java.io.*;
import javax.servlet.*;
import javax.servlet.http.*;
import java.sql.*;
public class EmployeeServlet extends HttpServlet {
  protected void doPost(HttpServletRequest request, HttpServletResponse response)
       throws ServletException, IOException {
    String empId = request.getParameter("empId");
    response.setContentType("text/html");
    PrintWriter out = response.getWriter();
    try {
       Class.forName("com.mysql.jdbc.Driver");
       Connection con =
DriverManager.getConnection("jdbc:mysql://localhost:3306/company", "root", "password");
```

```
String query = "SELECT * FROM employees WHERE emp_id=?";
       PreparedStatement ps = con.prepareStatement(query);
       ps.setString(1, empId);
       ResultSet rs = ps.executeQuery();
       if (rs.next()) {
         out.println("<h2>Employee Details</h2>");
         out.println("ID: " + rs.getInt(1) + "<br>");
         out.println("Name: " + rs.getString(2) + "<br>");
         out.println("Department: " + rs.getString(3));
       } else {
         out.println("No employee found with ID " + empId);
       con.close();
    } catch (Exception e) {
       out.println("Error: " + e.getMessage());
    }
}
```

Output:

1)

```
Employee Details
ID: 101
Name: John Doe
Department: HR
```

2)

Experiment -8.3

Aim: To develop a JSP-based student portal that accepts attendance data and saves it to the database using a servlet.

Objective: 1) Combine JSP for UI and Servlets for logic

- 2) Perform INSERT using JDBC
- 3) Build a real-world web flow

```
Code:
```

```
<%@ page language="java" %>
<html>
<head><title>Student Attendance</title></head>
<body>
 <h2>Mark Attendance</h2>
 <form action="AttendanceServlet" method="post"> Roll
  No: <input type="text" name="roll"><br> Name:
  <input type="text" name="name"><br> Status: <select</pre>
  name="status">
    <option>Present
    <option>Absent
  </select><br>
  <input type="submit" value="Submit">
 </form>
</body>
</html>
import java.io.*; import
javax.servlet.*;
import javax.servlet.http.*;
import java.sql.*;
public class AttendanceServlet extends HttpServlet {
  protected void doPost(HttpServletRequest request, HttpServletResponse response) throws
       ServletException, IOException {
    String roll = request.getParameter("roll"); String
    name = request.getParameter("name"); String status
    = request.getParameter("status");
response.setContentType("text/html");
```

```
PrintWriter out = response.getWriter();
    try {
       Class.forName("com.mysql.jdbc.Driver");
       Connection con =
DriverManager.getConnection("jdbc:mysql://localhost:3306/student_portal", "root",
"password");
       String query = "INSERT INTO attendance (roll_no, name, status) VALUES (?, ?,
?)";
       PreparedStatement ps = con.prepareStatement(query); ps.setString(1,
       roll);
       ps.setString(2, name);
       ps.setString(3, status);
       int i = ps.executeUpdate(); if
       (i > 0) {
         out.println("<h3>Attendance marked successfully for " + name + "!</h3>");
       con.close();
    } catch (Exception e) {
       out.println("Error: " + e.getMessage());
  }
CREATE TABLE attendance (
  id INT AUTO_INCREMENT PRIMARY KEY,
  roll_no VARCHAR(20),
  name VARCHAR(100),
  status VARCHAR(10)
);
```

OUTPUT:
